

CMS ANYWHERE

PUTTING YOU In Control

CMS Anywhere, our cloud-based monitoring platform, empowers you to manage your assets portfolio using simple, intuitive color-coded graphics in real-time with instant alerts straight to your inbox. You can now experience unprecedented transparency of asset performance and reliability with advanced monitoring.

CMS Anywhere allows the user to view all their assets in a single view whether the assets are elevators, escalators, or other devices with appropriate interfaces. Our EMU Gateway and EMU NIM modules offer a range of monitoring solutions depending upon your requirements.

CMS Anywhere has demonstrated its ability to improve trouble call response times, reduce critical events such as asset shutdowns and improve the lifecycle costs of your assets. Instant alerts are sent direct to you via email and/or text alerts meaning the building management and the elevator company will never miss a shutdown or elevator entrapment event.

Comprehensive performance analytics through the use of historical data produces system reporting including comparative performance of portfolio units, availability, and equipment summary.

Service technicians can now be equipped with real-time data benefiting from CMS Anywhere's innovative algorithms leading to predictive intervention reducing unplanned shutdowns. Technicians will simply login once onsite to register the reason for a particular service visit.

CMS Anywhere monitors around the clock providing real-time status and alerts.

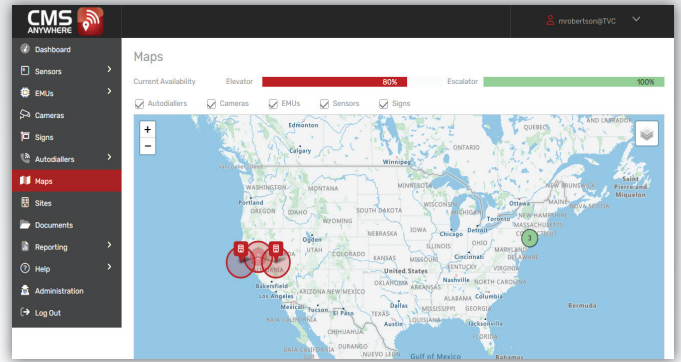

CMS Anywhere monitoring has proven effectiveness with customers reporting KPI improvements from 65% to 98+%.

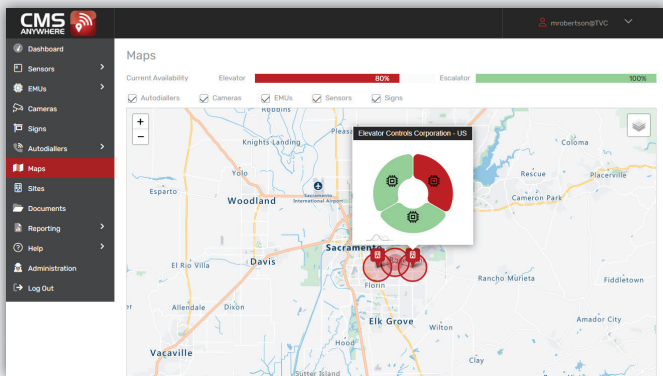

Key asset management decisions can be supported with multiple reports offering data insights to asset life and knowing exactly where you need to assign your budgets.

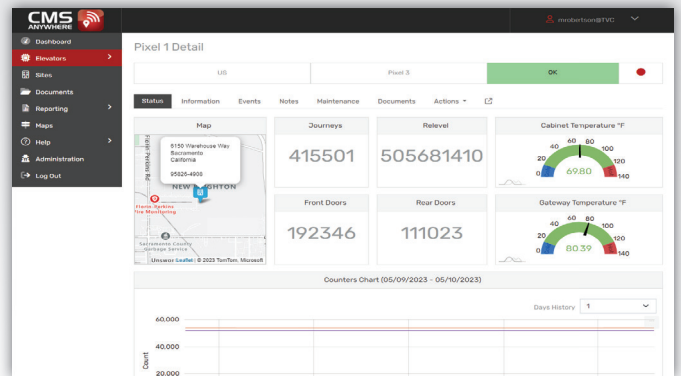

Graphical dashboard shows at-a-glance view of key performance indicators such as equipment availability, equipment out of service, worst sites, alarm trappings and much more. Manage your own dashboard to suit your requirements using the simple drag and drop features.

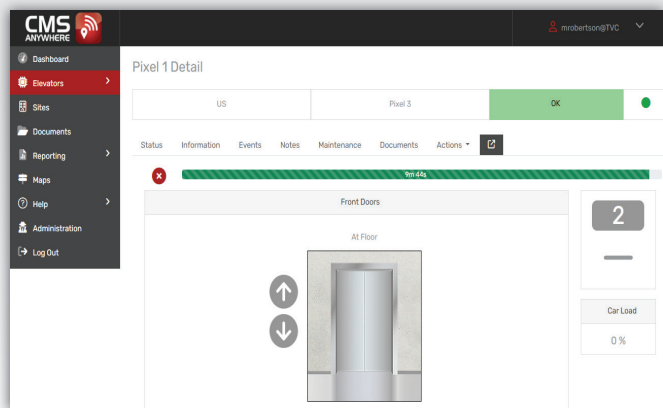

Map overview illustrates graphical representation of the availability of sites around the world. Click on each icon to drill down to gain more information.

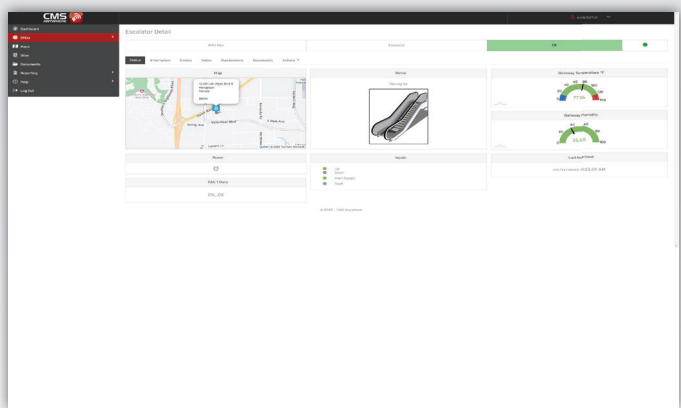

Location map provides representation of building asset locations including status.

Asset overview shows number of journeys, releveling, door operations, controller temperature and more...

With EMU Gateway on Pixel and GALaxy controls, calls can be placed onto elevators from anywhere in the world. The service provider can interrogate the elevator status, verify faults and reduce costly site visits by remote fault verification.

Graphical real-time information includes speed, elevator trips, re-leveling, temperature, and humidity.
