

SAFETY IS IN YOUR HANDS

Argus Door Lock Monitor

WORKS WITH ANY ELEVATOR SYSTEM

The Argus Door Lock Monitor is the only truly universal and out-of-the-box solution. Thanks to the patented technology from Argus, the installer can configure the door lock monitor to work with any elevator system in a matter of minutes. There are no input relays or modules to customize, just a very friendly graphical user interface that allows the installer to configure the characteristics of each signal that needs to be monitored.

FITS INSIDE THE ELEVATOR CONTROLLER

Size does matter! Thanks to its small size, the Argus Door Lock Monitor fits inside the existing elevator controller, saving significant time and resources. In the unlikely situation where the fit is not possible, a small and convenient UL-Certified enclosure (7"x7"x4") is available for purchase.

INSTALL ANYWHERE

The small size of the Argus Door Lock Monitor offers flexible installation options. It can be installed inside the existing elevator controller or in a dedicated external enclosure.

1

Elevator Controller Cabinet

In almost all cases, the small size of the Argus Door Lock Monitor will allow for its installation right inside the Elevator Cabinet. Both, Snap-On DIN-rail and a screw options are available.

2

External DIN-Rail Enclosure

In cases where the installation inside the Elevator Controller is not possible nor desired, the Argus Door Lock Monitor can be conveniently installed and easily accessed inside a small external hinged-window enclosure.

EASY WIRING VERIFICATION

The beautiful graphical user interface provides an instantaneous visual indication of the status of each signal. This allows easy identification and correction of any wiring or configuration problem.

WARRANTY

The Argus Door Lock Monitor is engineered and built to ensure its reliable performance. Any unlikely malfunction or defects are backed by our three year warranty.

ENERGY EFFICIENT

A very energy efficient solution consuming less than 3 Watts. That is about the same amount of power consumed by a single relay (out of many) used by competitor solutions.

CERTIFIED AND CODE COMPLIANT

The Argus Door Lock Monitor is not only certified per the applicable standards and ASME 17.3 Section 3.10.12 code change, but also future proof. In the case of future regulation changes, the device will be brought up to compliance thanks to seamless software upgrades.

PATENTED

Thanks to the Argus patented technology, the installer can configure the door monitor to work with any elevator system in a matter of minutes.

BILINGUAL EXPERT TECH SUPPORT

A successful, hassle-free installation can be further supported live by technical experts available past regular business hours. Live support is available both in English and in Spanish.
