

Traction Controller from Vantage

*Faster to install, faster to configure
and faster to troubleshoot than other controllers.*

If you're an elevator contractor looking for a smarter, more efficient way to manage traction elevators, the Nexus™ Traction Controller from Vantage is engineered with your needs in mind.

Designed to streamline every stage of your workflow, Nexus™ both accelerates installation and configuration and makes troubleshooting easier than ever before. By simplifying wiring, enabling quick on-site adjustments, and providing intuitive diagnostics, Nexus™ helps you complete projects faster, reduce labor costs, and deliver reliable service to your customers with confidence.

FASTER Installation

The Nexus™ is designed with fewer field wires, making installation not only faster but far less error-prone. The simplified wiring design helps your crew accelerate their workflow, reduce labor costs, and finish projects on schedule (or ahead of it).

FASTER Configuration

Nexus™ makes configuration simple. Field modifications that used to require software updates or specialized tools can now be made quickly and easily right at the controller.

Whether you're adjusting door timing, tweaking valve settings or fine-tuning system behavior, you make changes on the fly without digging into complicated software.

FASTER Troubleshooting

Troubleshooting with Nexus™ doesn't slow you down, either. The large 7" touchscreen gives technicians an at-a-glance view of system status, fault codes and real-time performance data. Say hello to faster service calls, quicker issue resolution and less downtime for your customers.

The Nexus™ Traction Controller from Vantage

Configuration & troubleshooting are quicker and easier with Nexus™

The Nexus™ Traction Controller redefines efficiency and simplicity for elevator professionals. From rapid installation to intuitive configuration and seamless troubleshooting, Nexus™ is engineered to streamline every step of the process. With advanced features and user-friendly interfaces, it empowers your team to work smarter, save time, and deliver outstanding results for every project.

1 Touchscreen UI available at three convenient locations

- Controller
- Car Top
- Car Operating Panel

2 Find what you need quickly and easily

- No hidden parameters
- Functional descriptions for each controller option for easier configuration
- Easy-to-read parameter ranges
- Dynamic interface converts all units for you

3 Easy-to-navigate menus

- Configuration and troubleshooting are quick and easy
- Integrated fly-out menus and status icons are shown on every menu page

Technical Specifications

Application: Traction VVVF
Max Landings: 96
Opening Type: Front and Rear
Max Openings: 192
Max Speed: Up to 1400fpm
Operation: Simplex or Group (up to 4 cars)

Universal IO: Field configurable
Motor Control (VVVF): KEB F5/F6
Serial Communications: Y
Integrated Cartop Box: Y
Elevator Code: All
Fire Service: All
