

GAL Universal Drive Arm Kit

Designed for GAL "L" Drive Arm Operators

Upgrade Your Efficiency with GAL's Adjustable, Three-Piece Drive Arm Kit

The Adjustable Solution for GAL Door Operators

The GAL Universal Drive Arm kit is expertly engineered to substitute the older one-piece aluminum door operator drive arms with a robust, adjustable three-piece solution. Designed for precision setup and flexibility, this kit streamlines installations and adjustments for common GAL operator configurations. This kit is designed for GAL Operators utilizing "L" drive arm linkage.

KEY FEATURES & BENEFITS

Adjustable Three-Piece Design

Replaces cumbersome one-piece arms with an easy-to-adjust, three-piece linkage.

Installation Flexibility

The adjustable nature provides flexibility in the setup process.

Comprehensive Compatibility

Supports both single/two speed side slide and single speed center-parting door operators.

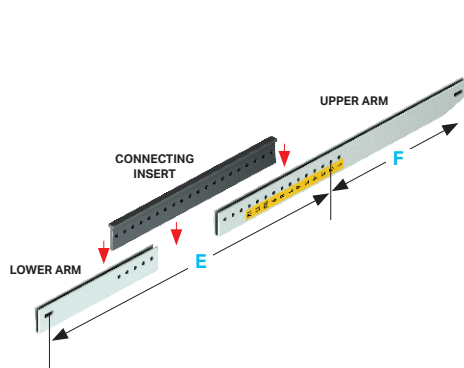

COMPATIBLE GAL OPERATOR MODELS

The GAL Universal Drive Arm kit is specifically designed for GAL Operators that use the "L" drive arm linkage. Compatible models include:

- MOVFR3
- MODL (L-style)
- MOHL
- MOVFR2
- MOML
- MOXL
- MOVFRW

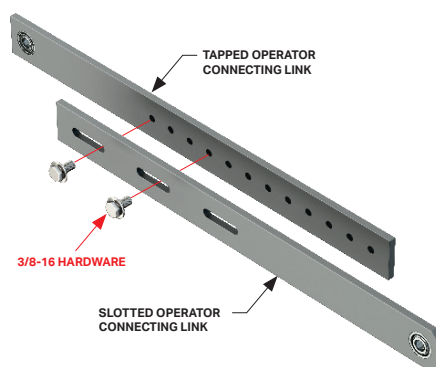

HOW IT WORKS

The adjustable nature of the drive arm is achieved through its segmented components. Installation of the kit typically involves three major setup processes, tailored for either Side Slide or Center-Parting operators.

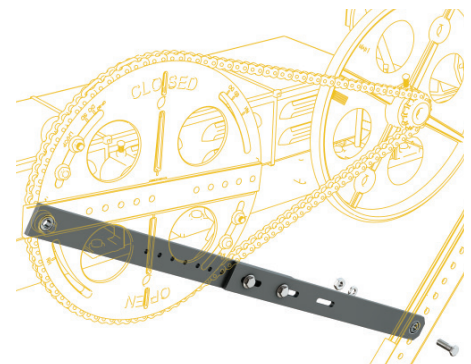

Aluminum Arm Set Up

Requires placing the upper and lower aluminum arms on a flat surface and sliding the connecting insert between them.

Operator Connecting Link Assembly Set Up

This assembly utilizes tapped and slotted operator connecting links. The overall length (the distance between the bearings on each end) is determined by referring to the Installation Guide or a custom operator layout.

Drive Arm Assembly Set Up

This involves fastening the upper arm to the drive arm pivot plate (Side Slide) or drive arm plates (Center-Parting) and connecting the arms to the clutch/door link. Center-Parting kits include two door links (5" and 6") and one door bracket, where the correct link is chosen using the operator data table or custom layout.

TECHNICAL SPECIFICATIONS

The GAL Universal Drive Arm kit is intended only for GAL Operators with "L" drive arm linkage. It is not meant to be used with other manufacturers' operators. Special engineering and custom prints may be required in certain cases, and in some extreme situations, this kit may not be appropriate.
